# Manually Operated Globe Valve

DN15 - 150

The Parker Bestobell range of Stainless Steel, extended globe valves have been designed to eliminate leakages, maximise lifetime operation and reduce maintenance and spares cost for ship operators, whilst providing full compliance with Class requirements

The range is available with either butt weld or flanged options and utilises Parker Bestobell's unique independent bonnet and flange design, eliminating leakage through the flange gasket. Coupled with a three stage packing at the top of the stem, Parker Bestobell globe valves are leak free to atmosphere.

The floating disc arrangement provides absolute sealing across the seat, and is designed to provide a tight, leak free shut off whilst still providing compliance with fire safe requirements for LNGC applications. Nitronic steel bushings provide smooth operation without galling problems.

## Features

- Designed and manufactured for use on LNGC, FSRU & FLNG in accordance with BS6364
- Full range of Class 150 Stainless Steel extended globe valves. Class 300 available for sizes up to DN100.
- Independent bonnet and flange design
- Floating disc arrangement
- Firesafe graphite gasket
- Firesafe all metal seat design
- Firesafe graphite, carbon, nitronic steel packing at the top of the stem
- Nitronic steel bushings
- Laser etched nameplates
- DN200 – DN350 options available
- Outside screw option available

Stainless Steel extended globe valve

## Technical

- Full material traceability backed by BS EN 10204 3.1/3.2 certification
- Temperature range -196°C to + 80°C
- Available in Butt Weld (ANSI b16.25) and Flange (ANSI B16.5) connections
- Shell wall thickness in accordance with ANSI B16.34
- 316 Stainless Steel construction for marine applications
- Fire safe approved to BS EN ISO 10497:2004 & ANSI/API Standard 607 fifth edition June 2005
- Full 3.2 certification to meet Class requirements

# Cryogenic Actuated Globe Valve

## Hydraulically Actuated DN25 - DN350

The Parker Bestobell range of Stainless Steel, extended globe valves have been designed to eliminate leakages, maximise lifetime operation and reduce maintenance and spares cost for ship operators, whilst providing full compliance with Class requirements.

The range is available with either butt weld or flanged options and utilises Parker Bestobell's unique independent bonnet and flange design, eliminating leakage through the flange gasket. Coupled with a three stage packing at the top of the stem, Parker Bestobell globe valves are leak free to atmosphere.

The all metal seat of the valves are designed to provide a tight, leak free shut off against the valve disc and allow compliance with fire safe requirements for LNGC applications. Nitronic steel, also Aluminum-Bronze, bushings provide smooth operation without galling problems.

The valves can be operated by either a linear or multi-turn hydraulic actuator, and both types are used for throttling and on/off applications. Position control is provide either by a potentiometer or with a torque switch, and On-Off actuation is controlled by limit switches.

# Cryogenic Swing Check Valve

DN25 - DN350

**Stainless Steel Swing Check Valve with bolted bonnet. Available with flanged end connections, with easy access to the serviceable parts of the valve**

The valves are designed and manufactured for use with LNG, LPG and other flammable gas services.

Loose bolted bonnet design allows for thermal expansion and contraction and eliminates leakage at the bonnet gasket.

Shell minimum wall thickness in accordance with B16.34 and optional full material traceability backed by BSEN 10204 3.1/3.2 certification.

Flanged end connections to ANSI B16.5 and Butt Weld end connections to B16.25

Stainless Steel Swing Check Valve

## Features

- 316 Stainless Steel construction for marine applications
- Internal hinge design
- PTFE seal ensures a tight shut off
- Quick removal of headworks allow fast, easy maintenance
- Temperature range -196°C to + 80°C
- Fire safe approved to BS EN ISO 10497:2004
- ISO 9001 accreditation
- General design in accordance with BS6364

## Technical

- Full material traceability backed by BS EN 10204 3.1/3.2 certification
- Temperature range -196°C to + 80°C
- Available in Butt Weld (ANSI B16.25) and Flange (ANSI B16.5) connections
- Shell wall thickness in accordance with ANSI B16.34
- 316 Stainless Steel construction for marine applications
- Fire safe approved to BS EN ISO 10497:2004

# Cryogenic Lift Check Valve

DN25 - DN200

**The Parker Bestobell range stainless steel lift check valves have been designed to reduce leakage across the seat, maximise lifetime operation and reduce maintenance and spares cost for ship operators, whilst providing full compliance with Class requirements**

The valve range is available with either butt weld or flanged options designed to ANSI standards, and designed to prevent back flow in LNG systems

Both the valve disc and the metal seat have a final lapped finish to provide the excellent sealing properties across the seat.

The bolted bonnet headworks provides for quick and easy access for maintenance and servicing of the valves.

Stainless Steel Lift Check Valve

## Features

- Designed and manufactured for use on LNGC, FSRU & FLNG and LNG fuel systems in accordance with BS6364
- Full range of Class150 stainless steel swing check valves. Class 300 available for sizes up to DN100
- Firesafe all metal seat design
- Lapped valve disc and seat
- Bolted bonnet headworks
- Firesafe graphite gasket
- Laser etched nameplates

## Technical

- Full material traceability backed by BS EN 10204 3.1/3.2 certification
- Temperature range -196°C to + 80°C
- Available in Butt Weld (ANSI b16.25) and Flange (ANSI B16.5) connections
- Shell wall thickness in accordance with ANSI B16.34
- 316 Stainless Steel construction for marine applications
- Fire safe approved to BS EN ISO 10497:2004 & ANSI/API Standard 607 fifth edition June 2005
- Full 3.2 certification to meet Class requirements

# Miniature Needle Globe Valve

Bolted Bonnet - Extended and Non-Extended Stem  
DN15 - DN25

**Stainless Steel extended and non-extended spindle needle globe valve with bolted bonnet and integral metal seat.**

Available with socket weld, butt weld and flanged ends, the valve has a conical seat design for a tight shut off. The bolted bonnet allows for simple site maintenance, with easy access to the serviceable parts of the valve.

Stainless Steel Spindle Needle Globe Valve

## Features

- Designed and manufactured for use with LNG, LPG and other flammable gas services
- Temperature range -196°C to + 80°C
- 316 Stainless Steel construction for marine applications
- Fire safe approved to BS EN ISO 10497:2004
- Loose bolted bonnet design allows for thermal expansion and contraction and eliminates leakage at the bonnet gasket
- Anti-blow out stem for operator safety
- Rotating disc prevents galling seat contact and reduces wear
- Quick removal of headworks allows fast, easy maintenance

## Technical

- Designed and engineered for use with Group 1 gases
- ISO 9001 accreditation- design and manufacture to ASTM B31.1 and BSEN 1626
- Optional full material traceability backed by BSEN 10204 3.1/3.2 certification
- **CE** Marking according Pressure Equipment 97/23/EC
- **CE** Marking to Directive 99/36/EC only on written request complete with purchase order

With Buttweld Ends

# Screw Down Non-return Valve

Inside Screw  
DN25 - DN65

**Stainless Steel Extended and non-extended stem globe valve with bolted bonnet and available with socket weld and butt weld ends, the valve is of the cone seat design for drop tight shut off. Unique Parker Bestobell loose flange bolted bonnet design allows for thermal expansion and contraction and eliminates leakage at the bonnet gasket.**

The bolted bonnet allows easy maintenance, even in confined spaces with lower bolting torques required than for an equivalent size union bonnet valve.

All valves are degreased for oxygen duty, assembled in clean room conditions and pressure tested prior to dispatch.

Limit switches available for position indication.

## Features

- Designed and manufactured for use on LNGC, FSRU & FLNG in accordance with BS6364
- Full range of Class 150 Stainless Steel extended globe valves. Class 300 available for sizes up to DN100.
- Independent bonnet and flange design
- Floating disc arrangement
- Firesafe graphite gasket
- Firesafe all metal seat design
- Firesafe graphite, carbon, nitronic steel packing at the top of the stem
- Quick removal of headworks allow fast, easy maintenance
- Nitronic steel bushings
- Laser etched nameplates

Stainless Steel Stem Globe Valve

## Technical

- Class 150 Stainless Steel extended globe valve with bolted bonnet and integral metal seat
- Designed for used with LNG, LPG and other flammable gas service in accordance with BS6364
- Shell wall thickness in accordance with ANSI B16.34
- 316 Stainless Steel construction for marine applications
- Temperature range -196°C to + 80°C
- Fire safe approval to BS EN ISO 10497:2004 & ANSI/API Standard 607 Fifth edition June 2005
- Full 3.2 certification to meet class requirements

# Float Level Isolation Valve

## DN200 & DN300

FLIV

The Parker Bestobell FLIV valve has been bespoke designed to work in conjunction with Whessoe or Henri secondary float level measurement systems, providing secure isolation of the float from the cargo tank. The FLIV eliminates the problems faced with gate valves of accidental cutting of the float tape that results in both tape and float falling back into the cargo tank.

Should the valve be accidentally closed before the float is fully re-wound, then the closing action of FLIV will result in the tape being trapped on the side of the valve disc rather than being cut, preventing the tape and float from falling back into the cargo tank.

The FLIV is operated by a quarter turn gearbox that has a clear open / shut indicator enabling quick and easy checks on the position of the valve disc. The gearbox is also fitted with 'padlock flanges' so that the valve can be locked to preventing unauthorised operation.

The compact design of the FLIV means that a single operative can operate both the valve and the level gauge with ease.

An integral inspection chamber is incorporated in the valve design for the inspection and / or replacement if the float, thus eliminating the need for a separate fabricated component. The FLIV is fire-safe by design using graphite gaskets on all external joints and PTFE/metal-to-metal backup on the disc.

Float Level Isolation Valve

### Features

- Designed and manufactured for use on LNGC and FSRU
- 316 Stainless Steel construction for marine applications
- Integral inspection chamber
- Easy use handwheel and gearbox
- Padlock to prevent unauthorized operation
- Open/close indication
- Swing disc operation prevents cutting of float tape

### Technical

- Designed and engineered for use with Group 1 gases
- ISO 9001 accreditation- design and manufacture to ASTM B31.1 and BSEN 1626.
- Temperature range -196°C to + 80°C
- Optional full material traceability backed by BSEN 10204 3.1/3.2 certification.

# Cryogenic HP Manual Globe Valve

Class 2500 (370 Bar)

DN15 - 100 (1/2" - 4")

**The Parker Bestobell range of HP globe valves have been designed specifically for the MAN ME-GI fuel gas systems operating at 320 bar pressure or higher. The range covers all of the necessary manual valve applications within the system.**

The range is offered with six CV profiles from 5 USGPM up to 30 USGPM, and three standard body sizes. These will cover both cryogenic and gas phases in the system. Pressure drop can be minimised by selecting the correct CV profile for the system conditions and flow rates. The end connection can then be machined to suit.

The range is available with various size butt weld connections and utilises Parker Bestobell's unique independent bonnet and flange design that eliminates leakage through the flange gasket. Seat leakage at high pressure is also eliminated through careful lapping of the seat and disc faces.

The valves are available with 400mm extended stem for the cryogenic phase, and short stem for the gas phase or for valves that see low flow conditions in cryogenic service. The smallest body size can be used as an instrumentation valve with NPT connections.

HP Manual Globe Valve

## Maximum Working Pressure (MWP)

Up to 370 bar (5366 psi) at -196°C to +80°C

## Features

- Unique Bestobell loose flange bolted bonnet design allows for thermal expansion and contraction and eliminates leakage at the bonnet gasket
- Lapped metal-to-metal seat ensures tight shut off at all times
- Valve is fire safe by design
- Designed and engineered specifically for cryogenic service
- Anti-blowout spindle and one-piece high strength design for
- Precision machined one-piece extension tube cover with integral bush for high pressure use
- Fast/easy maintenance of disc
- Long life carbon and graphite gland packing
- Gearboxes available in marine grade paint for on deck applications

## Technical

- Designed and engineered for use with LNG.
- Designed and manufactured in accordance with ASTM B31.1, BSEN 1626 and BS ISO 21011.
- Optional full material traceability backed by BSEN 10204 3.1/3.2 certification.
- 316L Stainless Steel construction for marine applications
- Temperature range -196°C to + 80°C

## CV15: Pressure Drop v Flow At -163°C LNG

## Materials

# Cryogenic HP Pneumatic Actuated Globe Valve

Class 2500 (370 Bar)  
DN15 - 100 (1/2" - 4")

The Parker Bestobell range of HP globe valves have been designed specifically for the MAN ME-GI fuel gas systems operating at 320 bar pressure or higher. The range covers all of the necessary actuated valve applications within the system and allows end users to select on/off or control valves where necessary.

The range is offered with four CV profiles from 5 USGPM up to 30 USGPM, and two standard body sizes. These will cover both cryogenic and gas phases in the system. Pressure drop can be minimised by selecting the correct CV profile for the system conditions and flow rates. The end connection can then be machined to suit.

The range is available with various size butt weld connections and utilises Parker Bestobell's unique independent bonnet and flange design that eliminates leakage through the flange gasket. Seat leakage at high pressure is also eliminated through careful lapping of the seat and disc faces.

The valves are available with 400mm extended stem for the cryogenic phase, and short stem for the gas phase or for valves that see low flow conditions in cryogenic service.

DN50 Pneumatic Actuated Stainless Steel Globe Valve

## Maximum Working Pressure (MWP)

Up to 370 bar (5366 psi) at -196°C to +80°C

## Features

- Unique Bestobell loose flange bolted bonnet design allows for thermal expansion and contraction and eliminates leakage at the bonnet gasket
- Lapped metal-to-metal seat ensures tight shut off at all times
- Valve is fire safe by design
- Designed and engineered specifically for cryogenic service
- Anti-blowout spindle and one-piece high strength design for operator safety
- Precision machined one-piece extension tube cover with integral bush for high pressure use
- Fast/easy maintenance of disc
- Long life carbon and graphite gland packing
- Actuators available in "fail open" and "fail close" operation
- Actuators available in marine grade paint for on deck applications

## Technical

- Designed and engineered for use with LNG.
- Designed and manufactured in accordance with ASTM B31.1, BSEN 1626 and BS ISO 21011.
- Optional full material traceability backed by BSEN 10204 3.1/3.2 certification.

# Cryogenic HP Pressure Control Valve

Class 2500 (370 Bar)

DN15 - 65 (1/2" - 2 1/2")

**The Parker Bestobell range of HP globe valves have been designed specifically for MAN ME-GI fuel gas systems operating at 320 bar pressure or higher. The HP Pressure Control Valve has been specifically designed to fine control pressure in the main line before and after the evaporator.**

The valve is designed to reduce pressure in the main fuel line by safely discharging LNG from 320 Bar to less than 10 Bar. The CV has been significantly reduced to prevent excessive pressure loss in the main fuel line. The valve is supplied with a removable orifice plate so that the CV can be adjusted during commissioning if needed. By adjusting the CV allows for fine tuning of the flow rate and pressure drop through the orifice plate to suit operating conditions

The HP Pressure Control valve is available with various size butt weld connections to suit the pipe size and utilises Parker Bestobell's unique independent bonnet and flange design that eliminates leakage through the flange gasket. Seat leakage at high pressure is also eliminated through careful lapping of the seat and disc faces. The valves are available with 400mm extended stem for use in the cryogenic phase.

HP Pressure Control Valve

## Maximum Working Pressure (MWP)

Up to 370 bar (5366 psi) at -196°C to +80°C

## Features

- Unique Bestobell loose flange bolted bonnet design allows for thermal expansion and contraction and eliminates leakage at the bonnet gasket
- Removable orifice plate to adjust flow and pressure drop
- Discharge cage to reduce sound and cavitation
- Lapped metal-to-metal seat ensures tight shut off at all times
- Valve is fire safe by design
- Designed and engineered specifically for cryogenic service
- Anti-blowout spindle and one-piece high strength design for operator safety
- Precision machined one-piece extension tube cover with integral bush for high pressure use
- Fast/easy maintenance of disc
- Long life carbon and graphite gland packing
- Actuators available in "fail open" and "fail close" operation

## Technical

- Designed and engineered for use with LNG.
- Designed and manufactured in accordance with ASTM B31.1, BSEN 1626 and BS ISO 21011.
- Optional full material traceability backed by BSEN 10204 3.1/3.2 certification.
- 316L Stainless Steel construction for marine applications
- Temperature range -196°C to + 80°C

CV vs Disc Lift at -165°C LNG

# Cryogenic HP On/Off Pump De-Gassing Valve

Class 2500 (370 Bar)

DN15 - 25 (1/2" - 1")

**The Parker Bestobell range of HP globe valves have been designed specifically for MAN ME-GI fuel gas systems operating at 320 bar pressure or higher. The HP De-Gassing valve has been specifically designed for use in the pump startup loop of the HP fuel gas system to remove pressure from the pump as it builds up system pressure. It is also required to operate during the pump shutdown.**

The valve is designed to reduce pressure in the main fuel line by safely discharging LNG from 320 Bar to less than 10 Bar through the return pipe to the LNG tank. The CV has been significantly reduced to prevent excessive pressure loss in the main fuel line. The valve is supplied with a removable orifice plate so that the CV can be adjusted during commissioning if needed. By adjusting the CV allows for fine tuning of the flow rate and pressure drop through the orifice plate to suit operating conditions

The HP De-Gassing valve is available with various size butt weld connections to suit the pipe size and utilises Parker Bestobell's unique independent bonnet and flange design that eliminates leakage through the flange gasket. Seat leakage at high pressure is also eliminated through careful lapping of the seat and disc faces. The valves are available with 400mm extended stem for use in the cryogenic phase.

# Cryogenic HP Lift Check Valve

Class 2500 (370 Bar)

DN15 - 100 (1/2" - 4")

**The Parker Bestobell range of HP globe valves have been designed specifically for the MAN ME-GI fuel gas systems operating at 320 bar pressure or higher. The range covers all of the necessary check valve applications within the system.**

The range is offered with four CV profiles from 5 USGPM up to 30 USGPM, and two standard body sizes. These will cover both cryogenic and gas phases in the system. Pressure drop can be minimised by selecting the correct CV profile for the system conditions and flow rates. The end connection can then be machined to suit.

The range is available with various size butt weld connections and utilises Parker Bestobell's unique independent bonnet and flange design that eliminates leakage through the flange gasket. Seat leakage at high pressure is also eliminated through careful lapping of the seat and disc faces.

The lift check valves are suitable for use in both cryogenic and gas phases.

HP Lift Check Valve

## Maximum Working Pressure (MWP)

- Up to 370 bar (5366 psi) at -196°C to +80°C

## Features

- Unique Bestobell loose flange bolted bonnet design allows for thermal expansion and contraction and eliminates leakage at the bonnet gasket
- Lapped metal-to-metal seat ensures tight shut off at all times
- Valve is fire safe by design
- Designed and engineered specifically for cryogenic service
- One-piece high strength design for safety
- Precision machined one-piece body and extension tube cover with integral bush for high pressure use.
- Fast/easy maintenance of disc
- Vented disc to prevent locking in the open position and ensures fast reaction closing under back pressure.

## Technical

- Designed and engineered for use with LNG.
- Designed and manufactured in accordance with ASTM B31.1, BSEN 1626 and BS ISO 21011.
- Optional full material traceability backed by BSEN 10204 3.1/3.2 certification.
- 316L Stainless Steel construction for marine applications
- Temperature range -196°C to + 80°C

## CV15: Pressure Drop v Flow At -163°C LNG
